

EV Charge & Range Dashboard

SCENARIO
Discovering, exploring, and acting on EV charging, battery, and model data through the visualization dashboard

	Entice How does someone initially become aware of this tool?			Enter What do people experience as they begin the process?		Engage In the core moments in the process, what happens?				Exit What do people experience as the process finishes?		Extend What happens after the experience is over?		
Steps What does the person typically experience?	Hears About the Dashboard	Visits Website / App	Browses Homepage	Selects a Use Case	Applies Filters	Views Charging Dashboard	Views Battery & Range Dashboard	Views EV Model Comparison	Follows Guided Story	Exports Report	Makes a Decision	Shares the Dashboard	Returns for Updates	Gives Feedback
Interactions What interactions do they have at each step? People: Who do they talk to? Places: Where are they? Things: What touchpoints?	Word of mouth, city notice, or online search for "EV comparison India"	Website / Tableau Public / Tableau Server link	Landing page listing the Charging, Battery & Range, and EV Comparison dashboards	Dashboard navigation tabs / menu	Filter panel (brand, region, price, body style, powertrain type)	Charging heatmap, region/type bar chart, station map	Predicted vs. actual range chart, efficiency-by-brand chart	Price, top speed, and body-style comparison charts	Tableau Story walking through charging, pricing, and brand data	Export / Download PDF button	Final comparison view / saved filters	Shareable link or exported PDF sent by email	Revisits dashboard as new models or stations are added	Feedback form / rating prompt
Goals & motivations "Help me..." or "Help me avoid..."	Help me find a reliable way to understand EV options	Help me quickly see what this tool offers	Help me understand which dashboard is relevant to me	Help me get to the data that matters to me	Help me narrow results down to only what's relevant	Help me understand where and when demand is highest	Help me trust the real-world range, not just the spec sheet	Help me compare models side-by-side without visiting many websites	Help me see the big picture, not just individual charts	Help me save what I found so I can compare later or share it	Help me feel confident I've picked the right EV, station plan, or fleet action	Help me get input from family, colleagues, or my team	Help me stay current as the market changes	Help me help improve the tool for the next person
Positive moments What do people find enjoyable, fun, or exciting?	Excited to hear one tool covers charging, range, and pricing together		Clear, role-based options (planner, fleet manager, buyer) feel welcoming		Filtering feels fast and responsive	The heatmap makes peak charging hours immediately obvious	Comparing predicted vs. actual range builds confidence in the data	Having price, speed, and body style together saves a lot of time	The story format makes the data feel like a narrative, not a spreadsheet		Having all the data in one place makes the decision feel well-informed	Easy to share a link rather than re-explaining everything	Appreciate that data refreshes without needing a new tool	
Negative moments What do people find frustrating, confusing, or costly?		Unsure if the tool covers their city or preferred brands	Non-technical users may feel overwhelmed by dashboard jargon		Too many filter options can feel overwhelming at first		Some users may not know their own driving conditions to compare against		Users may skip the story if it isn't clearly signposted	Exported PDFs lose some interactivity			No notification when new, relevant data is added	Feedback forms can feel like a chore
Areas of opportunity How might we make each step better?	Could we run city/dealer partnerships to increase awareness?	Add a short intro banner explaining the three dashboards	Add simple role-based entry points ("I'm a planner", "I'm a buyer")		Offer preset filter combinations (e.g., "Budget EVs", "Family SUVs")		Add a simple driving-style selector to personalize range estimates		Add a "Start here" prompt pointing new users to the story first	Offer an option to export a personalized summary, not just raw charts			Add optional email alerts for new models or stations matching saved filters	Make feedback a quick 1-tap rating with an optional comment
